E-SERVICES TRANSLATION PORTAL SYSTEM ABSTRACT

A portal for translating data is provided wherein users upload text to be translated. The text may be in the form of Web pages, in the form of hypertext mark-up language (HTML) files, or other formats. The portal at least partially translates the data and facilitates the selection of a vendor or vendors to complete the translation process. The portal makes use of a database containing previously completed translations, which database is utilized to at least partially translate new requests for translations, and thereby reduces the workload of the vendors selected to complete the process.
